

ObjSpace: Configuring Dropshare

Dropshare (<https://getdropsha.re/>) is a commercial file-sharing tool for Macs. Dropshare v4 adds support for S3 compatible object stores like Delimiter's ObjSpace service.

Step-by-step guide

1. Install Dropshare v4 from their website <https://getdropsha.re/>
2. Once installed, select settings then preferences.
3. Select the Connections tab:

4. Click on 'Custom S3 API-Compliant Connection' at the bottom of the right hand side
5. A new connection popup will appear:

Any S3 API-compliant storage (e.g. DreamObjects) can be connected with Dropshare.

Bucket name:

Make sure the bucket already exists

Access Key:

Secret Key:

Server:

FQDN (e.g. s3.example.com)

Custom URL:

(optional) URL to given bucket, optional

Misc.: ☒ Use SSL

? Test connection Cancel Save & Close

6. Enter your bucket name, Access Key, Secret key (these two keys are shown on the welcome email) and then in custom URL enter [bucketname].obj.space.
7. Click Test connection to verify its working, then Save & Close.

Dropshare is now ready to use with ObjSpace.
